Figure 2

Diagram a: Shows the initial construction of the roof edge detail. The structure consists of a concrete slab (1) with a layer of insulation (2) and a waterproofing layer (3). The parapet wall (4) is shown in cross-section, with a drainage channel (5) integrated into the structure. The roof surface (6) is shown with a layer of insulation (7) and a waterproofing layer (8).

Diagram b: Shows the addition of a parapet wall and a drainage channel. The parapet wall (4) is shown in cross-section, with a drainage channel (5) integrated into the structure. The roof surface (6) is shown with a layer of insulation (7) and a waterproofing layer (8).

Diagram c: Shows the final construction of the roof edge detail. The structure consists of a concrete slab (1) with a layer of insulation (2) and a waterproofing layer (3). The parapet wall (4) is shown in cross-section, with a drainage channel (5) integrated into the structure. The roof surface (6) is shown with a layer of insulation (7) and a waterproofing layer (8).

Diagram d: Shows the final construction of the roof edge detail. The structure consists of a concrete slab (1) with a layer of insulation (2) and a waterproofing layer (3). The parapet wall (4) is shown in cross-section, with a drainage channel (5) integrated into the structure. The roof surface (6) is shown with a layer of insulation (7) and a waterproofing layer (8).
